OneDrive for Business Administrator Responsibilities

Responsible for all of the aspects of the OneDrive for Business service

- Maintenance and configuration
- User adoption and change management
- Governance
- Security & external sharing

Permissions when users quit the company

- Giving right access to the ex-employees files

Sometimes also responsible of OneDrive for Business client deployment

OneDrive for Business and SharePoint Relationship

**Built on top of
SharePoint**

**Evolution of “My
Sites” from
SharePoint on-
premises**

**Each user’s
OneDrive is a
SharePoint Site
Collection**

**Created under the
/personal managed
path when a user
first accesses**

**Administration
tightly coupled
between SharePoint
& OneDrive**

What Tools Do You Use as a OneDrive for Business Administrator?

**The OneDrive for Business
Admin Center**

PowerShell

External Sharing Overview

OneDrive for Business allows you to share artifacts with users outside your organization

- Folder
- Specific document

Sharing is done differently depending on what you want to share

Types of Links

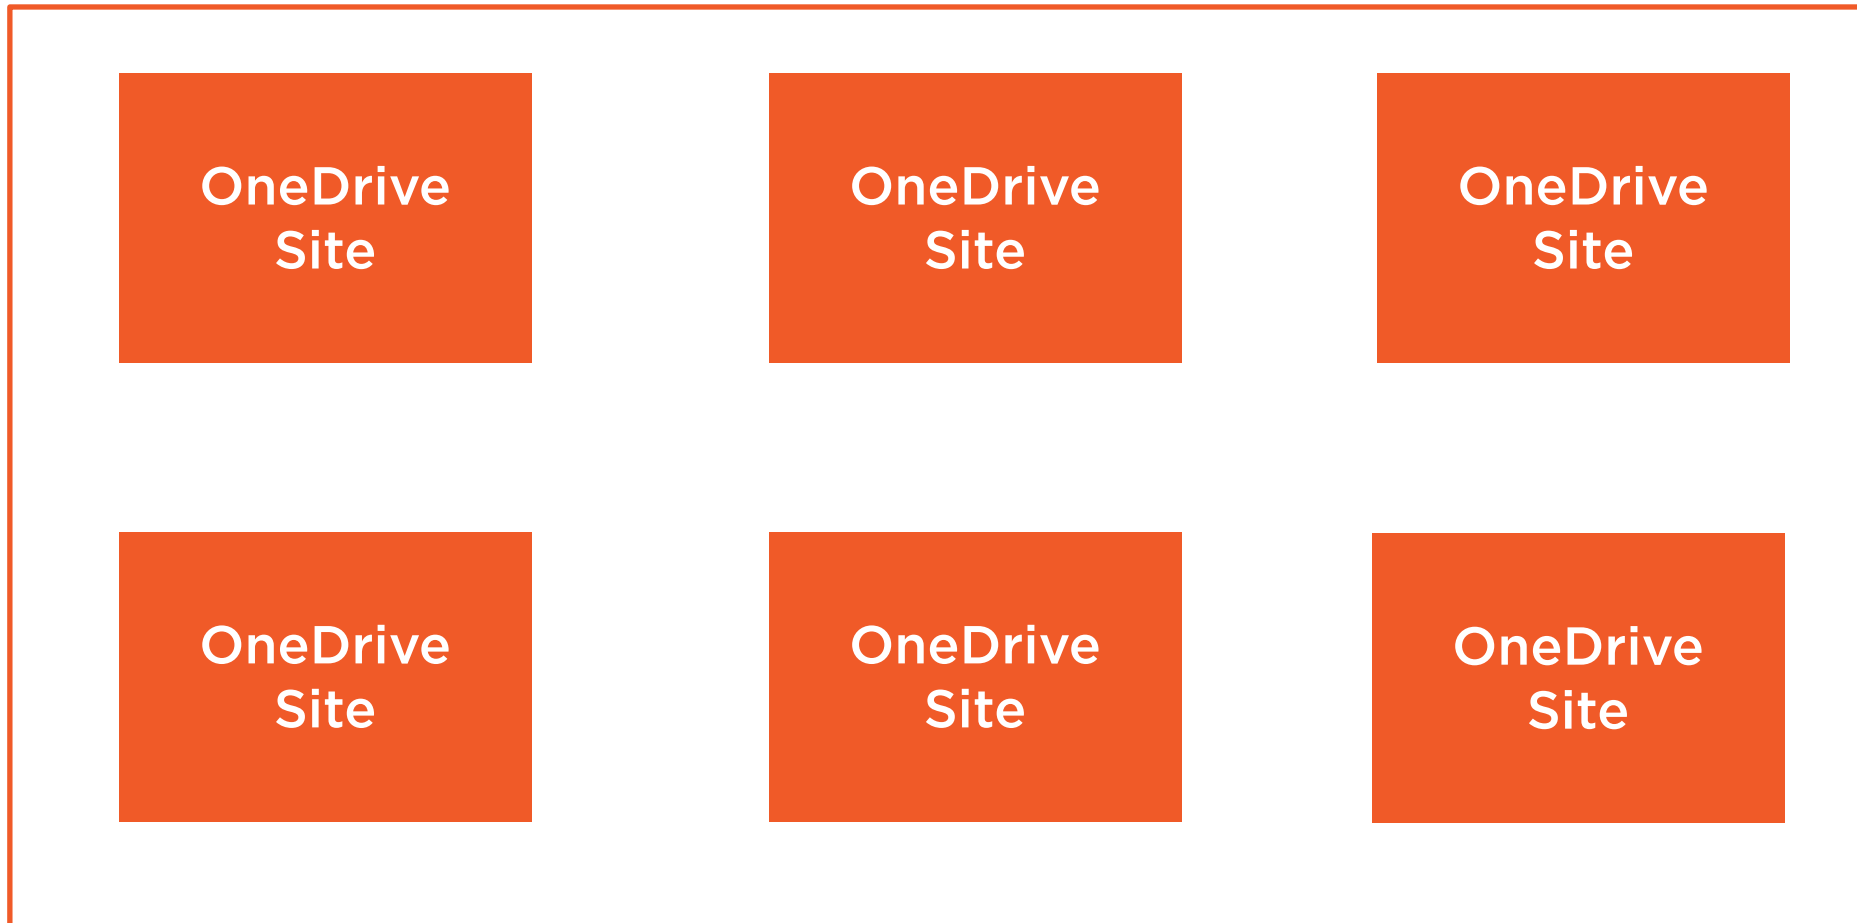

Multiple types of sharing depending on requirements

- Anyone
- People in my organization
- Specific people

Where Can We Control Settings

Tenant Level

Where Can We Control Settings

Tenant Level

Mobile Application Management for OneDrive

Global policy for the SharePoint & OneDrive apps

- Both iOS and Android

Microsoft Intune license required

- Or Enterprise mobility + Security

Policy only applies to Intune-licensed users

Admin account needs to have Intune license assigned

Storage Space Per User

Storage space per user depends on what license they are assigned

Three different possibilities

- 2 GB
- 1 TB
- Unlimited

Configuring Default Storage Space

Most subscriptions come with a default 1 TB storage limit

You can change default storage space via

- The OneDrive admin center
- PowerShell

Minimum: 1 GB

Maximum: 5 TB

Changing default storage will affect new and existing OneDrive for Business users

Who Deploys the OneDrive Client?

The deployment of the OneDrive client is usually done by the sysadmin

- Not by the SharePoint / OneDrive for Business administrator

Completely different skillset required to deploy client apps vs. managing the service

We will cover high-level overview in this course

- Other Pluralsight courses cover technical deployment part in detail

Deployment Methods

Manual

**System Center
Configuration
Manager**

Autopilot

Allow Users to Sync on Domain Joined PCs Only

Sync offline files on domain joined PCs only

Extra security measure

- No offline files left on personal devices
- Wipe if necessary from MDM solution

Requires PCs to be joined to an Active Directory domain

- Not Azure AD only joined PCs

Block Syncing of Specific File Types

Users can drag and drop all kind of files in their OneDrive for Business folder

- They would be automatically uploaded to OneDrive for Business

You can configure certain file types to not be synced with OneDrive for Business

Using Group Policy to Control the Sync Client

Group policies allows you to configure settings at the sync client level

Those settings are usually done by the systems administrator

- Most of the times different from the OneDrive admin
- Domain Administrator
